Cryptography & Network Security: RSA, AES & PKI Protocols

CS602 | StudyVault Academic Repository

StudyVault Digital Study Material - Department of Computer Science

Key Concepts & Highlights:

- Security Principles: Confidentiality, Integrity, Availability (CIA Triad), and Non-repudiation
- Symmetric Cryptography: DES structure, AES substitution-permutation network
- Asymmetric Cryptography: RSA mathematical foundation, key generation, and modular arithmetic
- Cryptographic Hash Functions: MD5 vulnerabilities vs SHA-256 and HMAC verification
- Public Key Infrastructure (PKI): Digital Certificates, X.509 format, and SSL/TLS handshake
